SUMMARY

Python Developer and AI/ML enthusiast with a strong foundation in Object-Oriented Programming, Django, SQL, and Machine Learning. Skilled in NLP and Retrieval-Augmented Generation (RAG), and currently building hands-on experience in Generative AI (GenAI). Passionate about building scalable applications and continuously exploring modern AI technologies.

TECHNICAL SKILLS

Languages	Python, SQL, HTML
Web Development	Django, Bootstrap
Python Libraries	NumPy, Pandas, Matplotlib
Machine Learning	Supervised learning, Unsupervised learning, preprocessing techniques
Generative AI	Retrieval-Augmented Generation (RAG), Large Language Models (LLM)

PROJECTS

Smart Job Application Tracker

may 2026

Python, Django, HTML, Bootstrap, SQLite, Git/GitHub, PythonAnywhere

- Developed a Django-based web application to manage and track job applications throughout the recruitment lifecycle.
- Implemented user authentication, CRUD operations, application status tracking, search/filter functionality, and dashboard-based application monitoring.

Smart AI Expense Tracker

Jul 2026

Python, Machine Learning, GenAI, RAG, Ollama, Scikit-learn, ChromaDB

- Developed an AI-powered expense management system that automatically categorizes expenses using a TF-IDF and Logistic Regression pipeline, achieving approximately 95
- Implemented Isolation Forest for detecting unusual expense transactions using amount, date-derived features, and expense category information.
- Built a RAG-based expense QA system using Sentence Transformers, ChromaDB, and Ollama, with semantic retrieval, similarity thresholding, grounded responses, and conversational query contextualization.

Vehicle Rental Management System

Jul 2026

FastAPI, Python, SQLAlchemy, MySQL, JWT

- Built a RESTful backend using FastAPI for managing users, agents, vehicle records and implemented JWT-based authentication and authorization to secure protected API endpoints.
- Developed role-based access control (RBAC) to restrict vehicle management operations to authorized agents and used the SQLAlchemy ORM to model users, agents, vehicles, foreign-key relationships, and database operations with MySQL.
- Implemented Pydantic schemas for request validation and structured API responses and integrated Alembic migrations for version-controlled database schema changes.

EDUCATION

Bachelor of Engineering in Electronics and Instrumentation Engineering

PDA College of Engineering — Visvesvaraya Technological University

Sep 2020 – Aug 2025

CGPA: 6/10
